

SA-TK01-000

Exhaust gas temperature sensor (NiCrNi)

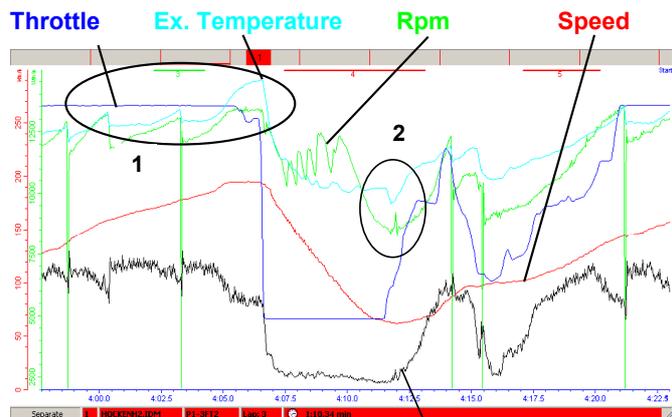

Function

- Temperature sensitive thermocouple measures exhaust gas temperature. Because of the low mass of the Type-K sensor the incoming signal is an exact and fast reacting measurement.
- To measure the temperature you need an amplifier for each temperature sensor

Advice:

- Mount the sensor to the first part of the exhaust system (100mm to 150mm away from piston)
- The sensor is screwed inside until ca. 1mm is looking inside the gas flow.
- More the sensor is screwed inside, the better is the resolution. But the sensor it will be broken earlier.

Cylinder press

- 1 = to rich while gear change
- 2 = Exhaust temperature down, hard throttle reaction

Notice:

- For more cylinders it is better to use a special temperature Box including 2 or 4 amplifiers.

Technical specifications

Electrical characteristics

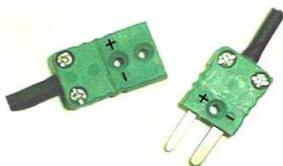

Voltage for amplifier.....	12 V
Measurement range.....	0 - 1000 °C
Sensitivity.....	0.25 °C
Absolute accuracy.....	± 1 %

Mechanical characteristics

Weight (incl. cable).....	15 g
---------------------------	------

Connector

temperature cable:

[+]	[-]
red	green
yellow	red
green	white
brown	blue
red	white
yellow	pink

Ordering information

Art.No.:	
amplifier (1 channel/analog)	IN-ATK01_xxx-000
amplifier (4 channel).....	BC-TK4iso-000
amplifier (8 channel).....	BC-TK8iso-000

Calibration
